Quarterly Service Report

Prepared for Northwind Logistics, Q3 2026

Executive summary

This report summarises the performance of the messaging platform between July and September 2026. Overall delivery rates **improved**, and response times fell for the third quarter in a row.

Customers sent more messages than in any previous quarter, with the largest growth in order updates and delivery notifications. The support team handled the extra volume without adding staff, mainly because the new routing rules sent simple questions to automated replies and passed complex cases straight to the right agent.

Delivery rate: 98.7% | Average response: 42 seconds

Report ID: NW-Q3-2026-118

Full statistics are available at https://dashboard.example.com/q3 or by email to reports@example.com.

Carbon savings this quarter: 1.2 t CO2, ranking us 3rd in the regional green index.

important notice: the September figures are provisional and may change after the final audit.

C o n f i d e n t i a l / Confidential

Metric	July	August	September
Messages sent	120,400	131,900	140,250
Delivery rate	98.1%	98.5%	98.7%

Average response	55 s
	47 s
	42 s

Figures are rounded to one decimal place.

Highlight: response times improved by 24% this quarter.

Next steps

Extend automated replies to returns and refunds.

Add Arabic and French message templates.

Review agent schedules before the holiday peak.

The holiday season usually doubles the number of delivery questions. To prepare, the team will publish clearer tracking pages, send proactive delay notices, and keep two extra agents on call during the busiest weeks.

Risks

Carrier delays outside our control.

Higher message costs from January.

Staff holidays overlapping with peak demand.

Each risk has an owner and a monthly review. Where a risk becomes likely, the owner prepares a short plan with options, costs and a recommended choice, so decisions can be made quickly.
